HortiMaX iWorker
Track labor and quality even more efficiently

Track labor and quality even more efficiently

With our new HortiMaX iWorker app, your workers can record their time spent on tasks even more efficiently. This will allow you to accurately monitor their productivity and keep a close eye on labor costs. Thanks to the app's simple design, entering data is a breeze. Workers are guided through each step of the input process, enabling them to add detailed information quickly and effortlessly. All data can then be viewed in our HortiMaX Productive management software.

iWorker offers a solution

Do you have a thorough understanding of your operational processes? All growers face the challenge of improving productivity and quality, while reducing costs. In addition to being a skilled professional, business owner and manager, you are looking for solutions that will make that possible. The vast majority of costs are labor costs. That's why you need a detailed understanding of your labor and production processes. This means closely monitoring workers and their activities, and keeping a constant eye on costs and quality. HortiMaX offers versatile solutions that will help you do that effectively. Our iWorker app is a solid addition to our expanding range of labor tracking products.

Designed with your workers in mind

While the first version of HortiMaX iManager was intended for managers and surpervisors, iWorker is designed for individual employees or team leaders. The app is designed specifically for use on smartphones (of your workers) or tablet devices. The app is cost-effective and can be used in addition to our mobile wireless handheld terminals, the HortiMaX MiniMaX, or our fixed Productive terminals. However, the iWorker app can also be used on its own, without the need for other terminals. This will result in a faster return on investment, making the app a cost-effective solution.

Suitable for allgrowing environments

With the iWorker app, labor and production tracking is fully digital. No more copying data by hand, which is both time-consuming and error-prone. But what if a worker moves out of range of your Wi-Fi network? No problem at all, as iWorker even works offline. The data entered will be uploaded automatically once the Wi-Fi connection is restored. Thanks to this feature, the app is not only suitable for closed growing environments, but will work just as well in open field production. Regardless of its application, iWorker will always provide you with a complete and virtually real-time overview of your production process.

Individual and team modes

When iWorker is in individual mode, workers are themselves responsible for entering the tasks that they have carried out. When in team mode, iWorker includes the ability to create teams. In this mode, the team leaders are responsible for entering the tasks that each team member has performed. This allows the activities of many workers to be recorded quickly and easily, while enabling you to keep track of both team and individual performance in Productive.

No more copying data by hand, which is both time-consuming and error-prone.

Convenient and easy to use for managers

Everything at your fingertips

The Productive software provides a single point of access to all your labor and production data. The software's user interface consists of a number of conveniently-arranged elements. These elements form the basis from which you or your supervisory staff can manage, analyze and control your company's labor and production processes.

A wide range of analysis options

Productive includes a wide range of analysis options. In addition to the various standard reports, Productive allows you to create your own custom reports. These can be exported in various file formats. For instance, you can define your own pivot tables, as is possible in Microsoft Excel. There is no one-fit solution that will suit all businesses. That's why you can customize reports to your individual needs, such as adding columns to perform calculations on certain data. The conditional formatting feature enables specific data to be highlighted, making your reports quick and easy to analyze. For at-a-glance viewing, information can also be presented in graphs or the Greenhouse View feature. This feature displays information on a floor plan of your greenhouse or production area.

With all these analysis options at your fingertips, you can get a detailed understanding of the costs and results of each worker, team, unit, hour, crop, etc.

Integrated quality checks

You can evaluate your workers using our HortiMaX iManager app. This is done by assessing the condition of the plants and the quality of the work performed. Various assessment parameters can be defined for each activity based on which a worker is evaluated. This app provides managers with all the information they need to carry out and record quality checks on the spot.

Integrated pest management

Productive makes it easy for workers to record diseases, dead plants or broken windows they've spotted during picking or other activities. These observations can then be shown in the Greenhouse View feature. You can also easily share this information with your team or consultants, allowing you to quickly determine whether your chosen pest control strategy is effective.

Your benefits at a glance
- Fast return on investment: no hardware required!
- Intuitive app operation: quick and error-free entry of activities
- Extremely affordable app designed specifically for workers and team leaders
- Suitable for open and closed growing environments thanks to online and offline entry capabilities
- Available for both iOS (Apple) and Android tablet devices and smartphones
